# The REPORT PAINTER

The utility works by converting CA-IDEAL report definitions to XML format. The reports can be maintained using a standard Excel format with custom validation and colouring.

Reports are broken down into sections:

Dictionary	Identification	Heading Area
Parameters	Column Headings	Detail

Which correspond with the original report sections. They can then be edited and modification made. Once saved the new report will be generated on the new XML file.

LINES PER PAGE	60
REPORT WIDTH	132

The detail section includes all the standard column and detail functionality available with CA-IDEAL

Once the user is satisfied with the report layout, the corresponding COBOL program is generated, allowing easy maintenance of existing reports once an initial migration to Cobol is complete.
